

LONIX TO DELIVER BUILDING AUTOMATION TO DORRABAY TOWER IN DUBAI

Building system technology provider Lonix and system integrator Gulf Wireless & Television will deliver intelligent, integrated building management systems to DorraBay Tower in Dubai, United Arab Emirates. The solution combines the most advanced, proven technologies into a full solution for building controls and management.

The 22-storey residential waterfront tower is strategically located in Dubai Marina with a range of panoramic views over the Arabian Sea, Marina and boat harbors. The curve design of the tower as well as its location at the end of the crossroad between the beach and the marina optimize the view for all its apartments. DorraBay is developed by Cayan, one of the pioneering property development companies.

“DorraBay Tower project is yet another evidence of fruitful co-operation between Lonix and GWT”, says Tuomas Koskenranta, Board Member of Lonix. “Gulf Wireless & Television with its thorough experience in low voltage business has proven to be a valuable extension to our presence in United Arab Emirates.”

About Lonix

Lonix (founded 1996) provides core technologies for home automation and intelligent building management systems. Solutions involving the forefront Lonix technologies bring comfortable, healthy and energy-efficient indoor conditions to all kinds of buildings, such as offices, commercial buildings, public properties and residences.
