

Living the luxury at the exclusive waterfront of Helsinki

LONIX AUTOMATION SYSTEMS TO THE PREMIUM RESIDENTIAL AREA IN FINLAND

Building technology provider Lonix delivers building automation and security systems to the luxurious Kaskisaari residential area. The stylish apartments are situated in the premium acres of western Helsinki, in one of the most exclusive contemporary waterfront addresses in Finland. The area is built by one of the biggest construction companies in Nordic, Peab Seicon, which has its roots in Sweden but is active also in Norway and in Finland. The building systems are designed by Instakon.

The beautiful Kaskisaari fulfils the dream of living at the waterfront with private access to sea, yet not too far from city center. Exclusive conditions are also the number one priority in the building systems, with special emphasis on security and indoor comfort. The Lonix solution integrates controls of heating, air-conditioning and lighting, consumption measurements, smoke alarms, access control and burglar alarms into one unity, which is controlled according to needs and situations – such as home/away – thus adjusting automatically to appropriate mode of operation.

Systems in all apartments in the area are monitored through the central control server, which is based on COBA Building Operating System. Through COBA it is possible to integrate - for example - cameras and digital video recording to the same system according to forthcoming needs.

Requirements of luxurious buildings are familiar to Lonix already from many different markets. “Quality, especially in this kind of high-end solutions, is always extremely important”, says Anu Kätkä, Managing Director of Lonix. “For us quality means not only versatile products and technically advanced solutions, but also reliability, ease of use and smooth operations. Quality is, in brief, what Lonix stands for.”

About Lonix

Lonix (founded 1996) provides core technologies for home automation and intelligent building management systems. Solutions involving the forefront Lonix technologies bring comfortable, healthy and energy-efficient indoor conditions to all kinds of buildings, such as offices, commercial buildings, public properties and residences. Lonix is active in Nordic countries, Baltic countries, Russia and Middle East. More info: www.lonix.com
