

New extension to the interoperable COBA systems:

LONIX RELEASES ENTERPRISE SECURITY SOLUTION FOR GLOBAL DISTRIBUTION

The intelligent building system provider Lonix releases its new, integrated enterprise security solution for global distribution. The comprehensive IP based access control and security management solution leverages the generic COBA integration platform to provide a world-class solution for a range of security applications. Lonix Security was created in co-operation with HID Corporation, which is part of the Nordic Assa Abloy Group.

Lonix Security provides unparalleled interoperability not only within traditional security environments, but also extends seamlessly to create a unified, intelligent building by integrating with diverse facility systems including automation and building management, lighting controls, energy management, fire detection and video monitoring. Lonix Security provides scalability ranging from single door solutions to multi-building or multi-campus deployments, extending the Lonix solutions into intelligent, integrated infrastructure applicable for all kinds of buildings and intelligent cities.

The integrated systems have significant contribution to energy efficiency, security and indoor comfort. "With our dedication to Intelligent Green Buildings, we are excited about this major leap forward", says Anu Kätkä, Managing Director of Lonix. "Security systems are an elementary part of the full solution and also an important trigger for other intelligent systems in the buildings. With its powerful integration capabilities and ease of use, Lonix Security meets any requirements of sustainable development in the constantly changing world."

About Lonix

Lonix (founded 1996) is the leading supplier of integrated automation and security systems and intelligent building management systems using the COBA BOS platform. Lonix is active in Europe, Russia, Middle East, East Africa, South-East Asia and Far East. More info: www.lonix.com

About COBA

COBA Building Operating System (BOS) is a generic software platform for integration and interoperability of all building systems. Standard based COBA BOS Framework definitions form the foundation of the platform. More info: www.coba-group.com
